

SECONDARY IOL CONSENT FORM

You do not have a lens in your eye. It was either removed during previous eye surgery or fell from trauma. This is why your vision is blurry. The only way to improve your eyesight is to place a small plastic lens inside your eye. Glasses, eye drops or drugs are not going to help. If you would like for us to do this we can book it for you.

The procedure lasts for about half hour and is painless as we are going to numb your eye before. Afterwards you will need to wear an eye pad. You will have to return to the eye clinic the next morning for an exam. We will remove your eye pad and give you eye drops to use for 6 weeks. You will need to return for an exam a few more times after the procedure. Your vision will be much better than what it was before but it will not be perfect. Also, you might need eyeglasses after the procedure. If you have health insurance the operation is free. The medicines for it cost 20-40 GhC. Please think about this and let us know if you would like to have it done. Please, do not go to a traditional healer, he will spoil your eye. Also let us know if you have any questions.

I understand the above and I am consenting to the secondary implant surgery in my RIGHT LEFT eye.
